

Natural is  
what we are.

# Origin

More than 1,400 metres high, Puig Major is the highest mountain in Mallorca and the Balearic Islands. This Mallorcan symbol is part of the Serra de Tramuntana, a Cultural Landscape since 2007 and UNESCO World Heritage Site since 2011.

This peak was the inspiration for the name Font Major, a natural mineral water whose source is deep at the heart of the enclave. The rain water gently filters through the boulders of the Torrent de Pareis canyon and down to the spring, located at the town of Escorca, in the middle of the Serra de Tramuntana.

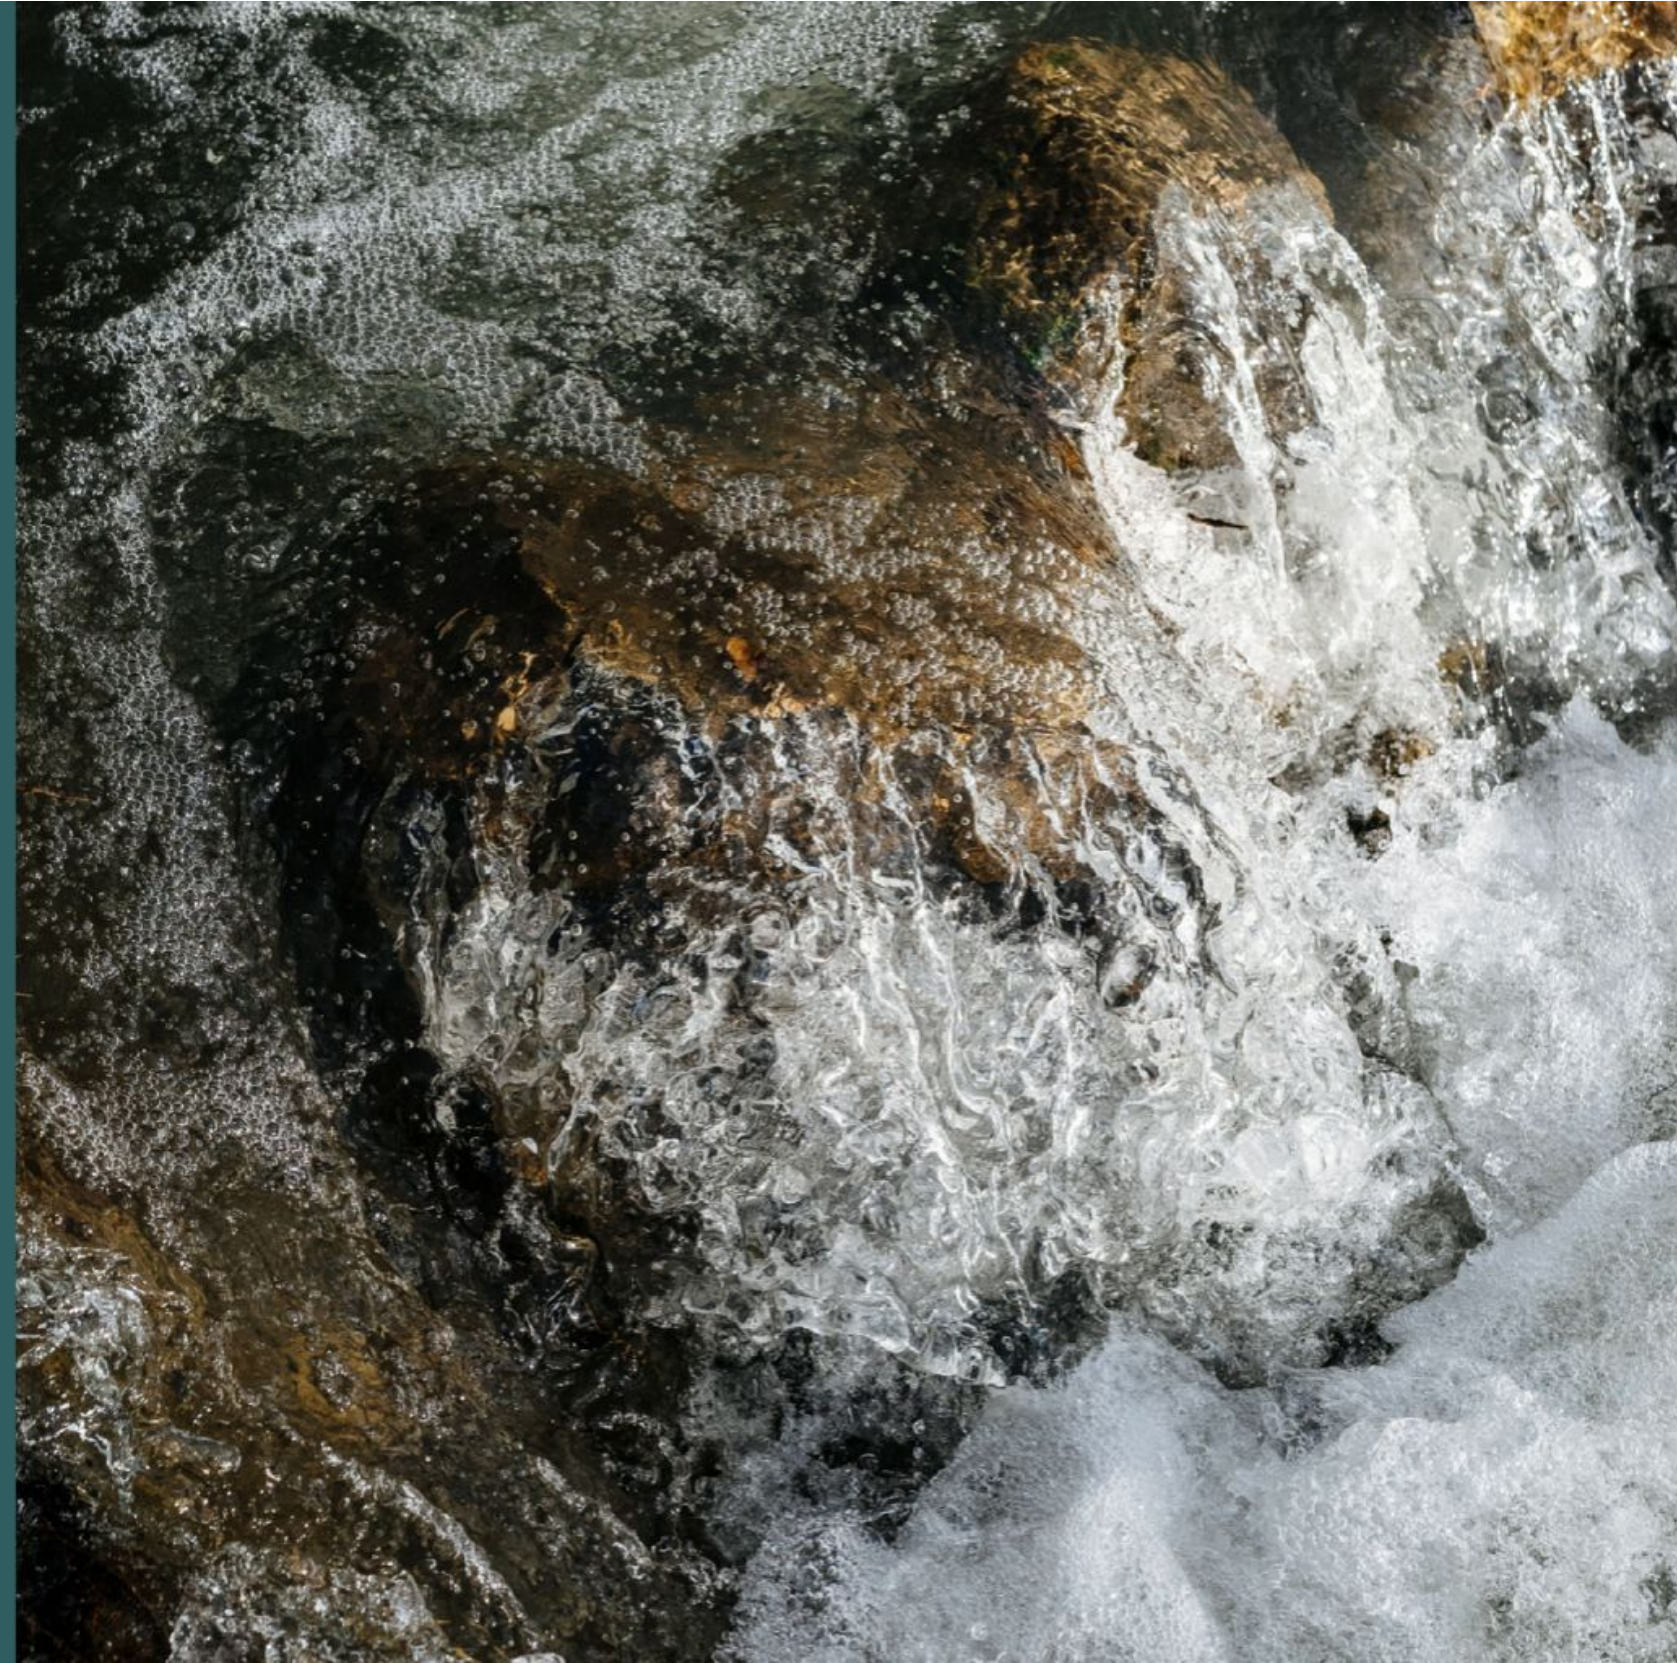

# Spring

Font Major has been enriched over the years with minerals and trace elements from underneath the grounds of the Serra de Tramuntana, giving the water a unique and very balanced composition.

It is naturally sourced and bottled at the foot of the spring in a way that protects its original purity. Thanks to its origin and distribution in Mallorca, Font Major is a local and km0 product.

# Sustainability

At Font Major, not only do we strive to offer the highest quality water, but we also work to respect our environment as much as possible.

*65% of our packaging is renewable.*

*100% of our product formats are renewable.*

We also ensure that all of the companies who supply us with paper and cardboard are certified as sourcing it from sustainably and responsibly managed forests.

And we promote sustainability in our processes and facilities as well, by using as little energy as possible and carrying out continuous improvement projects to ensure that we minimise our environmental impact.

New format 50cl

100% recycled plastic

# Sizes available

## Our water

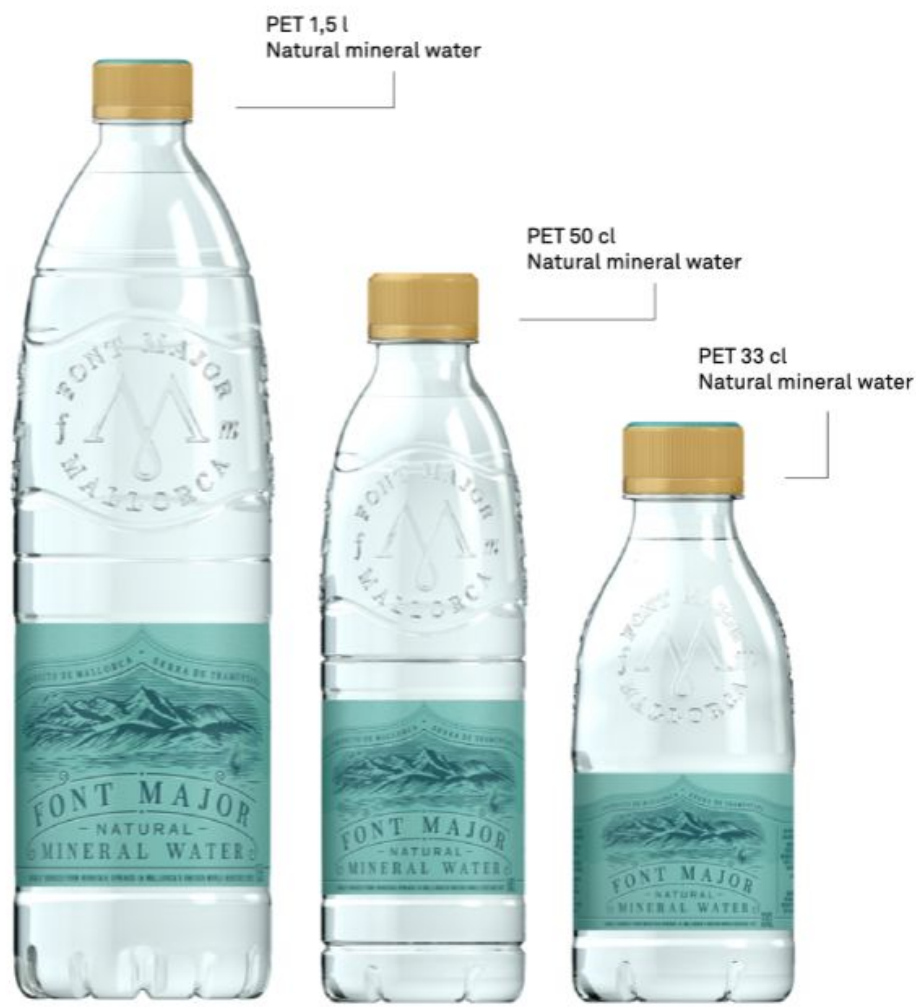

The privileged natural source of Font Major's water gives it a unique taste and perfectly balanced mineral composition.

Font Major has a low mineral content, making it perfect for diets that are low in sodium and for making baby foods.

## Chemical analysis

FONT MAJOR	(MG/L)
DRY RESIDUE	207
BICARBONATES	185
CHLORIDES	20,4
SULPHATES	15,5
SODIUM	8,94
CALCIUM	62,6
MAGNESIUM	6,45
SILICA	2,3
